In this thematic series, we will be interrogating the metrics behind microbiology publishing worldwide. The digital age has changed how research outputs are shared, discussed and used, allowing microbiology research to be accessed worldwide and to a wider audience. Journal articles are still the primary vehicle for dissemination of research. Understanding the metrics produced by and used to describe journal articles will help provide a clearer vision of microbiology research around the globe.

All submitted papers will be subjected to our standard independent peer-review. Authors should specify ‘Mapping Microbiology’ in the cover letter. Prospective authors for MiniReviews or Commentaries must contact the Editor in advance.

For instructions to authors please see the FEMS Microbiology Letters journal page: academic.oup.com/femsle
