

Uncovering QTL and candidate genes for tomato fruit cuticular lipid composition using the *Solanum pennellii* introgression line population

Josefina-Patricia Fernandez-Moreno, Dorit Levy-Samoha, Sergey Malitsky, Antonio J. Monforte, Diego Orzaez, Asaph Aharoni, Antonio Granell

SUPPLEMENTAL DATA

Supplementary Figure S1 Validated QTLs associated with the main cuticular lipid traits of *S. pennellii* fruits during the second season. A. Wax related QTLs from IL3.4. **B.** Cutin-related QTLs from IL8.3 and IL8.3.1. Abbreviations: vlcf, very-long-chain fatty acids; amy, amyriins; ehfa, epoxyhydroxy fatty acids; thfa, trihydroxy fatty acid; AC, alcohol; AD, aldehyde; AK, alkane; FA, fatty acid; ADd, aldehyde derivative; and TPd, triterpenoid derivative. See cutin monomers #08 to #11 in Figure 1. For more genetic marker information see Supplementary Table S1. Error bar, standard error (n = 3).

Supplementary Table S1 DNA markers used to screen cuticular lipid components in the *S. pennellii* IL population.

Data set based on "Tomato - Kazusa and SolCAP markers mapped to genome" (Ofner et al., 2016)

^a BINS described by Ofner et al. (2016).

* New gene rearrangement in SL2.50 database

DNA markers in black have been described for every IL by Ofner et al. (2016).

DNA markers in blue have been selected herein using the SOLCAP_SNP dataset (Ofner et al., 2016).

Supplemental Table S2 Gene expression levels for the selected candidate genes set.

* RPKM values obtained by Illumina RNA-Seq analysis on red tomato fruits from the IL population. Data available in the transcriptome profiling of *S. pennellii* ILs experiment (<http://ted.bti.cornell.edu/>).

^a Type of QTL (positive or negative; cutin- or wax-related) is described; ILs containing QTLs are also provided.

^b Short name based on tomato annotation and similarity to characterized Arabidopsis homologous (see Table 2).

^c Gene expression pattern. When it is increased or diminished similarly to the metabolite pattern it is considered as compatible (comp). The contrary is considered as Incompatible (Incomp).

^d Differential gene expression values for *Solanum pennellii* wild parental when compared with *S. lycopersicum*. Based on Supplementary Table sd4 from Koenig et al., 2013.

Supplemental Table S3 Gene and protein information for the selected candidate genes.

Tomato ^a	Gene ID	Short name	Ch ^b	Position ^b		Strand	Length (bp)	Protein ID	Protein Length	id% ^c	Aln ^d	amino acid substitutions ^e		
				Start	End							Total	Conserv	Non conserv
(A) Main QTLs:														
<i>vicfa3.4</i> QTL (600 Kb interval containing 93 genes)														
<i>S. lyco</i>	Solyc03g117800.2	CER1 protein (Fragment) [AtCER3/WAX2]	3	66830213	66834278	+	4,066	Solyc03g117800.2.1	642

^a Tomato species: cultivated tomato (*Solanum lycopersicum*) and wild tomato (*S. pennellii*)

^b Ch - chromosome

^c Data obtained from tomato database SL2.50 (<http://www.solgenomics.net/>)

^d id% - percentage of identity between *S. lyco* and *S. pen* proteins obtained by blastp (<http://www.solgenomics.net/>).

^e Aln - Protein alignment level: No of conserved amino acids / total of amino acids aligned.

Kb, Kilo bases, MB, Million Bases
