

Subcellular localisation and interactions among rubber particle proteins from *Hevea brasiliensis*

Daniel Brown¹, Mistianne Feeney¹, Mathin Hamadi², Chiara Lonoce^{1,§}, Roslinda Sajari³, Alessandra Di Cola^{2,€}, Lorenzo Frigerio^{1,€}

SUPPLEMENTARY DATA

Supplementary Figure S1. The cytosolic localization of CPT6 is independent of the position of the YFP tag

N. benthamiana leaves were agroinfiltrated with the indicated constructs and leaf sectors were imaged after 3 days. Scale bars: 20 μm

Supplementary Figure S2. Individual and combined expression of YFP-CPT6 and REF-mCherry

N. benthamiana leaves were agroinfiltrated with the indicated constructs and leaf sectors were imaged after 3 days. A-C: expression of YFP-CPT6 alone does not result in detectable signal in the mCherry channel. D-F expression of REF-mCherry alone does not result in detectable signal in the YFP channel. G-I: YFP-CPT6 and REF-mCherry do not colocalise, with REF labelling the nuclear envelope and CPT6 labelling the nucleoplasm. Scale bars: 10 μm (A-C, D-F) and 5 μm (G-I).

Supplementary Figure S3. Individual and combined expression of GFP-SRPP and YFP-CPT6

N. benthamiana leaves were agroinfiltrated with the indicated constructs and leaf sectors were imaged after 3 days. A-C: expression of YFP-CPT6 alone does not result in detectable signal in the GFP channel. D-F expression of GFP-SRPP alone does not result in detectable signal in the YFP channel. G-I: YFP-CPT6 and GFP-SRPP both label the nuclear envelope, indicating colocalisation in the endoplasmic reticulum. Scale bars: 10 μm .

Supplementary Figure S4. TOPCONS topology predictions for HRBP and its orthologues NgBR, TbRTA and LEW1.

Supplementary Figure S5. Immunoblots of single rubber particle proteins expressed in *N. benthamiana*. A: RFP fusions, detected with anti RFP. **B:** GFP fusions, detected with anti GFP.

Supplementary Table 1. Primers used in this study.

Supplementary Table 2. Constructs generated in this study.

Supplementary Table 2

List of constructs generated during this work

Construct	Vector	Description
35S:CPT6-YFP	pGreenII-0029	Full length genomic DNA of HRT2 fused in frame with a YFP tag at the C-terminus
35S:YFP-CPT6	pGreenII-0029	Full length genomic DNA of HRT fused in frame with a YFP tag at the N-terminus
35S:CPT6-mCherry	pGreenII-0029	Full length genomic DNA of HRT2 fused in frame with an mCherry tag at the C-terminus
35S:mCherry-CPT6	pGreenII-0029	Full length genomic DNA of HRT2 fused in frame with an mCherry tag at the N-terminus
35S:SRPP-GFP	pGreenII-0029	Full length cDNA of SRPP fused in frame with an GFP tag at the C-terminus
35S:GFP-SRPP	pGreenII-0029	Full length cDNA of SRPP fused in frame with an GFP tag at the N-terminus
35S:REF-mCherry	pGreenII-0029	Full length cDNA of REF fused in frame with an mCherry tag at the C-terminus
35S:mCherry-REF	pGreenII-0029	Full length cDNA of REF fused in frame with an mCherry tag at the N-terminus
35S:HRBP	pGreenII-0029	Full length cDNA of HRBP
35S:HRBP-CFP	pGreenII-0029	Full length cDNA of HRBP fused in frame with a CFP tag at the C-terminus
35S:CFP-HRBP	pGreenII-0029	Full length cDNA of HRBP fused in frame with a CFP tag at the N-terminus
35S:HRBP Δ TM1-CFP	pGreenII-0029	A 35S:HRBP-CFP mutant lacking residues 32-58

35S:HRBP Δ TM2-CFP	pGreenII-0029	A 35S:HRBP-CFP mutant lacking residues 87-108
35S:HRBP-RFP	pGWB654	Full length cDNA of HRBP with an RFP tag in frame with the c' terminus
