A Cluster of Exertional Rhabdomyolysis Cases in an ROTC Program Engaged in an Extreme Exercise Program: Corrigendum

The article, “A Cluster of Exertional Rhabdomyolysis Cases in an ROTC Program Engaged in an Extreme Exercise Program,” that published online on April 3, 2018 contained errors.

On page 516 in the abstract the authors state that, “Nine of 29 (31%) individual and two of 15 (13%) team participants were hospitalized with ER.” However, this should read, “Nine of 25 (36%) individual and two of 10 (20%) team participants were hospitalized with ER.”

In Table 1 the test times are listed incorrectly. The individual participants should be 44.75(5.71) and team participants should be 59.36 (11.81). On page 518 in the results section the authors state, “ECP workout as an individual (n = 9, 50%) or as a team participant (n = 2, 36%; p = 0.447).” Instead this should say, “ECP workout as an individual (n = 9, 26%) or as a team participant (n = 2, 20%; p = 0.447).”

The authors regret these errors.
